#### **Equations of Motion** 1

Potentials,

$$U_{mm} = \frac{-Gmm}{2r}$$

$$U_{\mu m} = \frac{-2G\mu mm}{\sqrt{r^2 + (z - y)^2}}$$

$$(1)$$

$$U_{\mu m} = \frac{-2G\mu mm}{\sqrt{r^2 + (z - y)^2}} \tag{2}$$

(3)

Kinetic Energy,

$$T = \frac{1}{2}\mu m\dot{z}^2 + m\dot{y}^2 + m\dot{r}^2 + m(r\dot{\theta})^2 \tag{4}$$

Lagrangian,

$$\mathcal{L} = T - V \tag{5}$$

$$= 1 - V$$

$$= \frac{1}{2}\mu m\dot{z}^2 + m\dot{y}^2 + m\dot{r}^2 + m(r\dot{\theta})^2 + \frac{-Gmm}{2r} + \frac{-2G\mu mm}{\sqrt{r^2 + (z-y)^2}}$$
 (6)

$$\frac{\partial \mathcal{L}}{\partial \dot{z}} = \mu m \dot{z} \tag{7}$$

$$\frac{\partial \mathcal{L}}{\partial \dot{r}} = 2m \dot{r} \tag{8}$$

$$\frac{\partial \mathcal{L}}{\partial \dot{y}} = 2m \dot{y} \tag{9}$$

$$\frac{\partial \mathcal{L}}{\partial \dot{\theta}} = 2m r^2 \dot{\theta} \tag{10}$$

$$\frac{\partial \mathcal{L}}{\partial \dot{r}} = 2m\dot{r} \tag{8}$$

$$\frac{\partial \mathcal{L}}{\partial \dot{u}} = 2m\dot{y} \tag{9}$$

$$\frac{\partial \mathcal{L}}{\partial \dot{\theta}} = 2mr^2 \dot{\theta} \tag{10}$$

(11)

$$\frac{\partial \mathcal{L}}{\partial z} = \frac{2G\mu m^2(z-y)}{(r^2 + (z-y)^2)^{3/2}} \tag{12}$$

$$\frac{\partial \mathcal{L}}{\partial z} = \frac{2G\mu m^2 (z - y)}{(r^2 + (z - y)^2)^{3/2}}$$

$$\frac{\partial \mathcal{L}}{\partial r} = 2mr\theta^2 - \frac{Gm^2}{r^2} - \frac{2G\mu m^2 r}{(r^2 + (z - y)^2)^{3/2}}$$
(12)

$$\frac{\partial \mathcal{L}}{\partial y} = -\frac{2G\mu m^2(z-y)}{(r^2 + (z-y)^2)^{3/2}} \tag{14}$$

$$\frac{\partial \mathcal{L}}{\partial \theta} = 0 \tag{15}$$

(16)

Equations of motion,

$$\ddot{z} = \frac{2Gm(z-y)}{(r^2 + (z-y)^2)^{3/2}} \tag{17}$$

$$\ddot{y} = \frac{G\mu m(z-y)}{(r^2 + (z-y)^2)^{3/2}} \tag{18}$$

$$\ddot{r} = r\dot{\theta}^2 - Gm(\frac{1}{2r^2} + \frac{\mu r}{(r^2 + (z - y)^2)^{3/2}})$$
 (19)

$$\ddot{\theta} = \frac{-2\dot{r}\dot{\theta}}{r} \tag{20}$$

(21)
